Released July 20, 1962  
1300-A New P.O. Bldg., Chicago 7, Ill.

ICE CREAM PRODUCTION

Ice cream production in the United States in June was estimated at 70,150,000 gallons, according to the Crop Reporting Board. This was 4 percent smaller than the enumerated total for June last year, while it was fractionally less than the 1956-60 average for the month. The seasonal gain from May to June this year was 8 percent, compared with 14 percent at this time last year and 11 percent between the 1956-60 averages for these months. Temperatures during June averaged below normal in a large portion of the country, but were above normal in the following areas: (1) from southeastern Wisconsin and central Illinois eastward to the Atlantic Coast and including most of New England and West Virginia; (2) most of Alabama and Florida; (3) a large western area from eastern sections of the Pacific States eastward to Utah, western Wyoming, and northwestern Minnesota.

Compared with June 1961, changes in ice cream production were mixed. Increases were 2 percent in the South Atlantic States, 1 percent in the South Central, and 4 percent in the Mountain. Output was 2 percent less in both North Central Regions. Production was 7 percent less in the Pacific States and 8 percent smaller in the North Atlantic. Output was off 16 percent in New York, 11 percent in Pennsylvania, and 7 percent in California. States in the North Atlantic and North Central Regions showing increases were: Massachusetts, Connecticut, Ohio, Michigan, Missouri, and Nebraska.

Compared with the 1956-60 average for May, changes by regions were also varied. Ice cream production was 1 percent more in both the East North Central and the Pacific States. Output was up 8 percent in the South Atlantic States and 10 percent in the Mountain. In the North Atlantic Region, the 4-percent loss was caused by decreases in all states except Massachusetts and Connecticut which had sharp gains. In the three leading states, production was down 1 percent in California, and 11 percent both in New York and Pennsylvania. Other regional decreases were 1 percent in the West North Central States and 3 percent in the South Central.

Revised ice cream estimates, by states, for January-May 1962 are shown on page 5. Enumerated data for 1961, by states and months, will be available about July 30 in annual release "Production of Manufactured Dairy Products" which may be secured upon request to this office.

### ICE MILK PRODUCTION

June production of ice milk in the United States was estimated at 21,555,000 gallons. This was the highest June output of record: 8 percent above June 1961 and 43 percent above the 1956-60 average for the month. Estimated production the first half of this year, totaling 84,665,000 gallons, was 15 percent more than the enumerated January-June total a year earlier and 48 percent greater than the 1956-60 average for the period.

Between May and June, output advanced 12 percent this year, compared with 24 percent at this time in 1961 and 15 percent on the average in the preceding 5-year period. Production gained seasonally in all regions except the South Central.

Compared with June 1961, output increased in all regions except the North Atlantic, where it decreased sharply.

### SHERBET PRODUCTION

Sherbet production in the United States during June, at 4,775,000 gallons, was 8 percent less than in June a year earlier and 9 percent less than the 1956-60 average for the month. Total January-June production this year, of 19,035,000 gallons, was down 4 percent from the total a year earlier, but it was up 3 percent from the 1956-60 average.

Sherbet manufacture advanced only 6 percent between May and June this year, compared with 16 percent between these months in 1961 and 23 percent on the average in the 1956-60 period. Seasonal gains occurred in all regions except the East North Central. Compared with June 1961, production was up in the North Atlantic Region, the West North Central, and the South Central. Output decreased in all other regions of the country.

"MELLORINE-TYPE" FROZEN DESSERTS PRODUCTION

7-20-62

U.S. production of Mellorine and other frozen desserts made with fats and oils other than milkfat in June was estimated at 5,215,000 gallons, the Crop Reporting Board reports. This was 1 percent less than the enumerated total in June 1961, but was 19 percent more than the 1956-60 average for the month. Total production in the first half of 1962, of 24,740,000 gallons, was 4 percent above the first half of last year and 29 percent greater than the 5-year average for this period.

Mellorine production advanced 3 percent between May and June this year. This compares with 11 percent between these months in both 1961 and the 1956-60 period. Production gained seasonally in all important-producing states except Illinois, Missouri, South Carolina, Alabama and Arizona.

Compared with June 1961, production was larger in Indiana, South Carolina, Arkansas, Louisiana, Oklahoma and California. Decreases were shown in all remaining important Mellorine-producing states.

WATER ICE PRODUCTION

Production of water ices during June was placed at 5,240,000 gallons. This was 9 percent less than in June 1961 and 4 percent smaller than the 1956-60 average for the month. Cumulative output the first half of this year was only fractionally less than in the similar period of 1961, but 4 percent greater than the 5-year average.

Compared with June 1961, production of water ices decreased sharply in all regions except the South Atlantic and the South Central, where it increased moderately. Production advanced only 7 percent from May to June this year, compared with 35 percent at this time a year earlier and 21 percent on the average in the 1956-60 period. Seasonal gains occurred in all regions except the East North Central.
